

**HealthySign** is a simple tablet system that allows you to send a document from your computer to a tablet, you can alter, type on the document and have it signed by a customer on the spot, then saved automatically to your Windows server share drive.

**Healthysign** installs and works just like a printer, but without paper!

**HealthySign** saves you and your staff time and eliminates the costs of printer, paper, scanner, shredders and secure disposal. Best of all, it involves no new software or difficult configuration.

With **HealthySign**, you can have up to 20 locally connected, and 20 remote tablets. Tablets are set for local or remote use. Separate apps are provided for remote use called **HealthySign Cloud**. There is *no* per-user charge.

*Form signed and dated on-screen by your customer using **HealthySign**. The form is automatically saved directly to your server via the **HealthySign** Service Module.*

## Installation

**HealthySign** is compatible with Windows, Macintosh and Linux. Simply install the **HealthySign** Service Module on your business network, configure printer settings on your computer/s, then install the tablets. Our easy user-guide shows you how to install in minutes.

The **HealthySign** Service Module has multiple printer queues to ensure speed for you and your customers. Each tablet is configured to connect to a one of these queues. When you print from one of your computers to the **HealthySign** print queue, the document will appear on the related tablet, ready for your customer to read and sign. Nothing more to do. It is that simple.

## Usage Examples

**Example 1:** A busy reception area with three receptionists sharing one printer. Each receptionist frequently has forms to be printed and then signed by customers. Print queues cause delays and wasted time/stress. Signed forms are then scanned, saved and hard copies are shredded - each of these steps taking time. Secure disposal is required, which is a cost to the business.

*In this case the each receptionist has a tablet, connected to their own print queue. Print jobs are automatically sent to the right tablet. The signed forms are automatically saved into a central repository. The process is simplified and automated - No waiting at printer, no scanning, shredding or disposal - saves time and money.*

**Example 2:** Reception with three receptionists, with infrequent need for customers to sign forms.

*In this case all receptionists' computers could connect to the same print queue and they all share a single tablet.*

**Example 3:** Users working away from the office regularly need to have forms signed by customers.

*These users carry a tablet with them and use the **HealthySign Cloud**. The document to be signed is sent to the tablet, the customer signs on the spot and the signed forms is automatically saved to the server at the office.*

## How to Purchase **HealthySign**

Visit [www.healthysign.com.au](http://www.healthysign.com.au) to order the **HealthySign** Service Module.

If you are a surgery, ask your local PHN support people for help.

## Tablets

You can use any Android tablet with **HealthySign**. We recommend you choose the tablet size that works best for you and your customers.

For short, simple forms, customers can easily sign a smaller (7") tablet.

For more detailed forms (eg leases, care plans) we recommend a larger (10") tablet.
